

- LiteMesh Compatible Commissioning Tool
- Simple Floorplan Plotting Operation
- Uploads Final Floorplan Layout Wirelessly
- Only Communicates with Local Devices
- Communicates with an 868Mhz frequency
- Rugged Design for Site Use
- Secure Communication Format

The LiteWork Commissioning tool is a rugged tablet with the ability to communicate with individual emergency luminaires on the LiteMesh network. As each fitting is signal strength located, it is plotted directly onto the floorplan of the building. Once this simple process has been completed, the information is uploaded to either the LiteMesh-Cloud platform, or the LiteMesh-Local user interface.

The LiteWork tablet forms part of the LiteMesh suite of wireless emergency lighting products. This unit communicates with individual IQD/1 nodes, the entire mesh and directly with the gateway for a seamless commissioning process.
