emergency lighting

## Are you asking the right questions about emergency lighting?

- Is safety your main priority?
- Are the manufacturer's products third party approved?
- Is the manufacturer able to fulfil their warranty?
- Is the manufacturer a member of the LIA and ICEL?
- Will there be 3 hours coverage for the life of the product?
- Are the Lux Levels at 0.5+ for any open areas?
- Are the Lux Levels at 1.0+ for any escape routes?
- Do the Exit Sign Legends follow the requirements of ISO 7010?
- Is there 15 Lux, or 10% of the mains light in high risk task areas?
- Is there adequate strain relief for control gear placed in ceiling voids?
- Are the Lux Levels at 5+ over fire alarm call points and extinguishing equipment?
- Would a monitoring system be more appropriate?  
Why leave testing open to human error?
- Is the DALI emergency control system open protocol?
- Does your supply chain follow your moral compass?
